ROAST GENERATOR

MAIN PROMPT

- You are an expert programming tutor and software developer. Your task is to generate a complete, beginnerfriendly yet well-structured solution for a console-based program that creates funny, randomized roasts based on a user's name.

Objective

Build a program that:

- Accepts a user's name as input
- Stores a collection of at least 10 creative roast templates
- Randomly selects one template each time the program runs
- Replaces a placeholder {name} with the user's input
- Outputs a unique, humorous roast message

Requirements

1. The program must run in the console/terminal.
2. Use a randomization method to ensure di erent outputs on each run.
3. Include at least 10 roast templates that are: o Light-hearted and funny (not o ensive, abusive, or harmful) o Varied in structure and creativity
4. Use placeholder substitution (e.g., {name}) for personalization.
5. Code should be: o Clean and readable o Properly commented o Beginner-

friendly Output Format Provide:

1. A complete working code solution (choose C++ as programming language)
2. A brief explanation of how the program works
3. Example outputs (at least 3 di erent sample roasts using the same name) Bonus (Optional but

Preferred)

- Add input validation (handle empty input)
- Allow the user to generate multiple roasts in one run
- Use functions to organize the code

Tone Style for Roasts

Keep humour clever, nerdy, and playful. Avoid anything o ensive, discriminatory, or inappropriate. Example

Roast Templates

- "{name} writes code so slow that even a turtle switched to Python."

- "If procrastination were an Olympic sport, {name} would already have a gold medal."
- "{name}'s debugging style is basically staring at the screen until the bug gets embarrassed and leaves."

Now generate the full solution.

ADDITIONAL PROMPT FOR DEBUGGING

- It shows same roast for every roast count and doesn't show the number of roasts.
- Now, without changing the existing file, make a copy of it. With the copied file, create roasts with more humour and creativity. Make the terminal program attractive.

PROBLEM (repeated roasts)

```
Get ready for some friendly, funny roasts!
Perfect for programmers who need a laugh.

Enter your name:

Naman
How many roasts do you want? (1-5): 2

----------------------------------------
        YOUR ROAST IS READY!
----------------------------------------

  Naman puts the 'C' in 'ctrl' because they can't finish anything without copy-paste.

----------------------------------------

  Naman puts the 'C' in 'ctrl' because they can't finish anything without copy-paste.

----------------------------------------
```

CORRECTED (no repeated roasts)

```
Get ready for some friendly, funny roasts!
Perfect for programmers who need a laugh.

Enter your name: Naman
How many roasts do you want? (1-5): 4

==================================
      GENERATING 4 ROASTS!
==================================

ROAST #1 OF 4
-> The only thing Naman accelerates is global warming with all that hot air.

ROAST #2 OF 4
-> Naman's Git commits are just variations of 'fixed stuff' and 'it works now'.

ROAST #3 OF 4
-> If being average was a crime, Naman would already be serving time.

ROAST #4 OF 4
-> If procrastination were an Olympic sport, Naman already has a gold medal.
```
